**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14, 18, 19, and 21, drawn to nucleic acids and probes specific to the cotton plant event 757, classified in class 536, subclass 23.1, for example.
  - II. Claims 15, 16, 17, 20, 22, and 23, drawn to methods for detecting cotton plant event 757, classified in class 435, subclass 6 and 91.2.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the products of invention I can be used in materially different processes such as in nucleic acid purification assays and aptamer assays.

***Further Restriction Applicable to All Groups***

Each group detailed above reads on a number patentably distinct groups, wherein each of the distinct groups is drawn to distinct probes, amplification primers and amplification products, which are each identified in the specification and in the claims by SEQ ID NO. Applicants must further elect a single set of primers, a single amplification product and a single probe to be examined with whichever group is elected. The three types of oligonucleotides should be related such that the amplification product is produced by the elected primers and comprises the elected probe. The elected sequences should be identified by SEQ ID NO. Any claims reciting non-

elected SEQ ID NO: numbers and not the elected SEQ ID NO will be withdrawn from prosecution. Any generic claims that do not recite SEQ ID NO will be examined for their full breadth, but any amendment to include SEQ ID NO will be restricted to the elected SEQ ID NO. Thus, four specific SEQ ID NO will be examined, two primers, a probe, and an amplification product.

Prior to allowance, non-elected subject matter will be required to be deleted from any allowable claims.

Applicant is advised that examination will be restricted to only the elected SEQ ID NO. and should not to be construed as a species election.

With regard to the restriction between individual sequences, each sequence is patentably distinct because they are unrelated sequences, i.e. these sequences are unrelated because they do not share a common structure. A reference against one would not anticipate or obviate another, and thus for each particular sequence a separate search of the patent and non-patent literature is required. These separate searches would impose undue burden on the examiner.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as demonstrated by their different classification and recognized divergent subject matter and because inventions I-II and the examination of all of the different sequences require different searches that are not coextensive, examination of these claims would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
